

Cotton Delinting Facility

The technology is a pollution free cotton seed delinting plant. It has been developed for the cotton growing industry with the intention of providing a process for obtaining cottonseed in an environment friendly manner. It avoids sulphuric acid and has engineered a system to capture the hydrochloric acid gas and ammonia gas to provide a pollution free delinting process.

Salient Features:

- Provide sulphuric acid free delinting process.
- Controls the emission of hydrochloric gas and ammonia gases through an air pollution control system.
- Allow an effective delinting process for the cotton industry in a pollution free process.

Major Application:

Delinting of cotton seed in a pollution free process.

Major End Users

Cotton growing industry.
