

## **iMFAST (Integra's Mobile Financial Access Secure Terminal)**

iMFAST, is a platform to enable banks to offer financial services to villagers in rural areas. The system includes a transportable computing device that can guide a villager through banking transactions in their local language. The system handles customer identification, data capture, and data transmission. While it has been designed for financial services, these core capabilities could be used in e-governance and other verticals as well.

### **Salient Features:**

- Deployment in a quick and cost effective manner with minimal changes to existing banking systems
- Identification - NFC/RFID
- Authentication – live biometric FPS
- Connectivity – wired and wireless
- Target environment (rural) specific
  - Voice guidance
  - Impact printer
  - Automotive battery powered

### **Major Application:**

- Portable terminal solution to carry out banking operations in rural areas and for illiterate customers.
- Doorstep banking and other services for semi rural and urban India.

### **Major End Users**

- Commercial bank branches in rural areas.
- Rural co-operative banks.
- Primary credit societies.
